

**FOR IMMEDIATE RELEASE**

**PDSI, makers of TeleStaff™, Announces Plan to Deliver a Comprehensive  
Web-enabled Public Safety Solution**

***Solution to include RMS, Scheduling, Emergency Notification, Automated Bidding  
and Middleware to Support Interfaces to CAD, Time and Attendance and  
Payroll/HR***

**Irvine, CA. – September 9, 2008** – Today, PDSI (Principal Decision Systems International) announced its plan to deploy the most comprehensive, web-enabled Public Safety solution available to the market. Capitalizing on its recent acquisition of a Public Safety RMS application, its market leading scheduling and notification solution TeleStaff, and PDSI's years of experience deploying web-enabled solutions to hundreds of government agencies throughout North America, PDSI confirms its development of this new solution, a move long anticipated by its customers and the industry.

This new product solution, unlike any on the market, will use TeleStaff's web platform, WebStaff™, as a foundation for deploying a suite of web-enabled Public Safety functions offered in one system. Product features will include new Police and Fire RMS components, TeleStaff, Auctions™ (PDSI's newest automated bidding product), as well as the middleware necessary for seamless integration with other Public Safety solutions including CAD, Time and Attendance and Payroll/HR.

"PDSI is in a unique position to provide the Public Safety community with a tested and fundamentally sound platform from which to deploy a host of web-enabled solutions. The WebStaff platform already supports over 300 Public Safety organizations that access it daily to communicate with TeleStaff. It provides the perfect platform to build upon," said Greg Ekstrom, President of PDSI.

In the Fall of 2007, PDSI completed an acquisition of a Fire RMS solution deployed in major metropolitan communities. The solution was viewed as a natural complement to TeleStaff, PDSI's flagship Public Safety scheduling solution used by nearly 500 municipalities throughout North America. "The natural extension of these two fundamental Public Safety solutions is their migration to the web," states Ekstrom. "To date, the Public Safety community has not seen the best the web has to offer. Our intent is to provide the community with a suite of key solutions tailored to their needs. With the Fire RMS solution under our control, all of our Public Safety customers will benefit from enterprise modules for various functions such as Personnel, Inventory, Continuing Education and more. This acquisition is the first of perhaps many that strengthens PDSI's position as THE Public Safety workforce management company."

PDSI's 15 years of Public Safety experience confirms that each organization has different needs, and no one solution fits all. From PDSI's new web-enabled platform, Public Safety organizations will choose the features they need from a menu that will include RMS, Scheduling, Notification, Day Off and Shift Assignment Bidding, and other relevant components. The first release of this

new platform will provide existing TeleStaff customers a dramatically improved and enhanced web experience and will include new features for non-TeleStaff customers as well.

### **About PDSI**

Principal Decision Systems International – PDSI, is a software and services company headquartered in Irvine, California that is focused on developing workforce scheduling software for a diverse array of industries including public safety, government, healthcare and hospitality. PDSI designs, develops, markets, implements and supports scheduling software products that automate daily processes such as scheduling employees to shifts, events or appointments resulting in value-added solutions and offering increased productivity among human resources. TeleStaff™ provides Public Safety organizations a scheduling and notification solution capable of managing complex rules, work codes and shifts. Collection Management System™ (CMS) is a group of applications specifically designed for blood collection organizations. STAFFeasy™ is a web-based event staffing and notification solution designed to fill positions based on rules and notify personnel of work assignments.
